

## Task Priority not compatible with mismatched scheduled Task assignments

**The information in this article applies to the Task Priority feature in Prism Deploy versions 11.0 and later.**

The Task Priority feature in Prism Deploy allows you to assign more than one task to a PC or group of PCs and to set a specific order for the Tasks to run (1, 2, 3..). However, the priority order may not work as expected if you choose to prioritize Tasks that have already been assigned using various scheduling options for Install or Reinstall, such as "Install after", "Reinstall after", "Reinstall on first logon after...", etc.

Let's look at a screen shot of various task schedule assignments properties.

The screenshot shows the Prism Deploy interface. On the left, the 'Configuration Groups' pane lists several groups, including 'Automatic Update Service (User-Defined Group)', 'Browser Installs (User-Defined Group)', 'Computer Type (User-Defined Group)', 'EXISTS <File> "c:\taskpriorityflag\flag.txt"', 'c:\taskpriorityflag\flag.txt', 'OS Version + SP Level (Predefined)', 'Populate by Time (User-Defined Group)', 'Sample Group (User-Defined Group)', and 'Windows Installer (User-Defined Group)'. The main pane is titled 'Task Assignments - c:\taskpriorityflag\flag.txt'. It contains a table with the following data:

Icon	Icon	Name	Schedule	As
✓	Icon	TestTask1	Reinstall after 2/2/2017 11:14:02 AM on target computer	c:\M
✓	Icon	TestTask2	Install after 7/8/2014 12:35:37 PM on target computer	c:\M
✓	Icon	TestTask3	Reinstall after 12/19/2016 12:35:40 PM on target computer	c:\M
✓	Icon	TestTask4	Reinstall on first Logon after 2/2/2017 3:17:25 PM on target comp...	c:\M
✓	Icon	TestTask5	Install after 7/8/2014 12:35:37 PM on target computer	c:\M
✓	Icon	TestTask6	Reinstall on first Logon after 7/18/2016 11:14:02 AM on target co...	c:\M
✓	Icon	TestTask7	Install after 7/8/2014 12:35:37 PM on target computer	c:\M
✓	Icon	TestTask8	Install after 7/8/2014 12:35:37 PM on target computer	c:\M

As you can see, there are eight tasks, all with various task schedule assignment properties. Because all of the tasks have previously been deployed with schedules, the prioritized tasks won't install this time in their intended priority order. For Tasks to install in the priority order you want, all the Tasks must have the same installation schedule (such as Install or Reinstall). All other Task execution Properties such as "Allow unattended installation" and "Run as" need to match as well.

Here is an example of task scheduling assignment properties matching;

The screenshot shows the Prism Deploy interface. On the left, the 'Configuration Groups' pane is the same as in the previous screenshot. The main pane is titled 'Task Assignments - c:\taskpriorityflag\flag.txt'. It contains a table with the following data:

Icon	Icon	Name	Schedule	Assigned
✓	Icon	TestTask1	Install	c:\taskpr
✓	Icon	TestTask2	Install	c:\taskpr
✓	Icon	TestTask3	Install	c:\taskpr
✓	Icon	TestTask4	Install	c:\taskpr
✓	Icon	TestTask5	Install	c:\taskpr
✓	Icon	TestTask6	Install	c:\taskpr
✓	Icon	TestTask7	Install	c:\taskpr
✓	Icon	TestTask8	Install	c:\taskpr

## Task Priority not compatible with mismatched scheduled Task assignments

As you can see, the Task scheduling assignment on the prioritized is now identical, and the Tasks will run in the proper priority order
