Randomized Task Execution

Administrators can now flag a task to be executed at a random time within the scheduled time window.

Enabling this new feature will help balance server load and reduce peak bandwidth needs.

In previous versions, tasks would execute on all computers upon receiving the task assignment or at the scheduled start time.

This feature can be enabled on the second page of the "Schedule Task" dialog box.

To enable assign a time window and make sure that "Randomize start time within window" is checked.
